

## The Benefits of Block-Pave Sealing and Maintenance

The beauty of Block-Paved & patterned imprinted driveways and patios is that they can be made to look immaculate and pristine by cleaning and applying a sealant coat. You can add years to its expected life span as well as aesthetically enhancing the appearance of your property.

Not everybody is aware that the sealant coat is an integral part of the structural make up of the finish and that an unsealed driveway or patio will wear away by the effects of the weather and traffic etc.

There are many types of Sealants on the market and Beacon Jet-wash Services install only the most trusted and reliable products on the market, having spent 20 years in the industrial coatings market we know what we are looking for!

There is a suitable sealant for every job and to suit most budgets and customers expectations. Please see other guides to choose a suitable sealant for your project.

### The main problems that Block-Pave Drives encounter:

- Erosion of the sand from elemental forces leading to 'surface creep' and subsidence
- Surface wear and discolouration from vehicles, pedestrians and weathering
- Combined forces of oils, dirt, weeds and algae

### The key benefits from our process:

- Increased lifespan and visual appeal of the paving by eliminating sand loss and preventing contamination
- Strengthened paving surface and substructure
- Ease of maintenance providing a cleanable surface
- Alleviation of the need for costly reinstatement

Anti-slip additives are also a great benefit adding to the safety of the drive-way, especially in the wet, but care must still be taken in adverse weather because

**\*ANTI-SLIP DOES NOT MEAN NON-SLIP and should be treated as such.**

These additives are only suitable for 'two coat' solvent systems so cannot be used on clay pavers.

Beacon Jet-Wash Services offer a complete service by thoroughly cleaning the surface and then applying the sealant coat/s of your choice from the wide range we offer.

The 'life expectancy' of sealants is obviously dependant on the quality of materials and competency of the installer. Our experience and materials used ensure the longest life possible with-in the client's budget.

I hope this guide answers all your questions regarding Drive-way sealing but please contact me by e-mail if you have other concerns or questions.

Yours sincerely  
Mark Harper (business owner)
